

ABSTRACT

COMPOSITION PACKAGED IN AN AEROSOL DEVICE, COMPRISING ALUMINA NANOPARTICLES

The present invention relates to a composition packaged in an aerosol device comprising a liquid phase and a propellant. The liquid phase comprises, in a cosmetically acceptable medium, nanoparticles comprising at least 10% by weight of alumina and exhibiting a number-average primary size of between 2 and 200 nm. The propellant is chosen from dimethyl ether, C₃₋₅ alkanes, 1,1-difluoroethane, mixtures of dimethyl ether and of C₃₋₅ alkanes or mixtures of 1,1-difluoroethane and of dimethyl ether and/or of C₃₋₅ alkanes. The invention also relates to a process for the cosmetic treatment of the hair and to the use as styling product.
